

“What would you lose if essential personnel and systems were out of commission for a week? For a month? We’ve seen hundreds of examples of such disasters in recent years. A good disaster recovery and continuity plan can be the difference between survival and irrecoverable loss.”

—Ramzi Nassar, President and CEO of REPS, Inc., the effectiveness group’s DRP strategic partner

Think EG DRP for HIPAA and GLBA compliance.

## The eg business continuity program

Have you made the mistake of thinking that backups, alone, constitute a disaster recovery/business continuity plan? What would happen to your business if a critical facility were out of operation for a week due to a natural disaster, fire, terrorist incident, or other emergency? Are you certain that in an emergency situation, you would have the critical information that you need to deal with the emergency and ensure continuity of your operations in a temporary location? eG offers through its partner, REPS, Inc., a customized and computerized business survivability solution powered by REPS’ CriPos Disaster Recovery Plan (DRP) technology. This state-of-the-art technology was developed based on FEMA’s recommendations for disaster preparedness and recovery. CriPOS DRP uses a simple, yet comprehensive, methodology involving the following stages: study of business functionality, a vulnerability study that identifies the elements that might affect the normal conduct of an organization’s business, and, finally, the creation of a computerized and customized flow of protocols and procedures that distribute the tasks and responsibilities for DRP among key employees. At this point, the organization’s new business survivability solution becomes part of its operational plan and is accessible at all times via portable devices, LAN and WAN, as well as via the Internet. The result? The most comprehensive, reliable, user friendly DRP program available today.
